

TWINZER or POWER ASSIST Layout

This is our layout for a **TWINZER** or our **POWER ASSIST** on a typical shortboard. This should be considered a starting point for your own designs. The cluster should be moved forward or back as the length of the board changes. This grouping of the cluster works for either a twinzer or a power assist and the relationship between the boxes should be maintained regardless of where the front controlling box is placed. A center box can optionally be added, as needed.

We use a **G Square** for our fin layouts, so the fin base width is the standard 4.50" used on the square.
